

Fishing Rules and Permits - Jokkmokk Municipality 2026

Welcome to the highlands of Norrbotten County!

The mountain region in Norrbotten County is vast and situated above the so called 'cultivation limit'.

In total, the region covers almost 55 000 km² – an area slightly larger than Denmark! Many different types of habitats can be found in the area, e.g. high-altitude landscapes with glaciers, wind-swept tundra, extensive wetlands, and birch forests with a surprisingly rich flora. In Norrbotten County, you will also find the highest mountain in Sweden, Kebnekaise, and the deepest lake, Hornavan, along with the last remnants of continuous and pristine, coniferous forests in the country.

Many of the largest national parks in Sweden belong to Norrbotten County. This is also where you will find Lapponia; the UNESCO World Heritage Site, preserved for its high environmental and cultural values. Extensive areas are encompassed by Lapponia, and it is utilized by nine different Sámi villages. Within the boundaries of the world heritage site, you will also find four national parks and two nature reserves.

Recreational fishing in the highlands of Norrbotten County

The mountain region in Norrbotten County encompasses more than 20 000 lakes. It is also crossed by many streams and rivers of different characters that together cover thousands of kilometers.

The region has much to offer all types of recreational anglers. There are excellent opportunities to enjoy spin fishing, fly fishing, ice fishing, and trolling etc.

Most anglers target arctic char, brown trout, and grayling, but in some highland locations it is even possible to catch salmon. At lower altitudes, perch, pike, and whitefish present further challenges, and offer great opportunities for sport fishermen.

Most rivers that flow into the Baltic Sea have been exploited for hydroelectricity, but in Norrbotten County large and free-flowing rivers still remain. In fact, this is the only place in Sweden where salmon migrate and spawn in mountainous regions.

Recreational fishing in Jokkmokk Municipality

Considerable parts of the highlands in Jokkmokk Municipality belong to national parks, i.e. Padjelanta/Badjelánnda and Sarek.

Recreational fishing is generally not allowed in the national parks, but in close proximity of two major hiking trails in Padjelanta/Badjelánnda you are allowed to catch trout and arctic char.

Another, more easily accessed, destination that offers good grayling and trout fishing is Pärälven, i.e. the Pearl River. A tributary stream to the Pearl River, Skieltajokk, is renowned for its trophy specimens of grayling. The site is carefully managed by the County Administrative Board of Norrbotten to ensure its status as a trophy water. In fact, only a restricted number of anglers are allowed to visit Skieltajokk every year. For more information on how to obtain a special permit please visit www.lansstyrelsen.se/norrbotten. Jokkmokk Municipality currently holds the Swedish national record for common roach. The record specimen weighed 1.726 kilograms, and was captured in the forested region below the alpine highlands.

Sustainable fishing in highland environments

In highland environments it is important to fish sustainably to ensure the persistence of viable populations and natural habitats. Highland habitats are particularly vulnerable since damaged soils and plants recover very slowly. Arctic waters are often poor in nutrients, and fish growth is temperature dependent.

This means that the recuperation of harvested populations is restricted to relatively short summer seasons. For that reason, you should not keep more fish than you can consume in one day, and release all excess fish.

Highland environments are also inhabited by semi-domestic reindeers. Reindeers are sensitive animals, so please observe that fishing is prohibited if it interferes with reindeer husbandry in the area.

Please remember to:

- Collect your garbage. Trash left in highland habitats will decompose very slowly. In fact, in some places it will never disappear.
- Be careful around reindeers. If you meet a reindeer, stand still and let it pass.
- Minimize your effect on local fish populations by releasing excess fish alive.

How to release fish

For catch-and-release practices to be meaningful it is important to handle hooked fish carefully so that they are not injured.

What factors determine fish survival?

Two factors are particularly important in terms of fish survival: hook placement and water temperature. Deeply hooked fish might bleed to death when released. The same goes for fish with hooks in their gills and eyes. It is also important to keep fights short, and to land fish as quickly as possible, especially when water temperatures are high. Otherwise lactic acid levels will build up in their muscle tissue. High levels of lactic acid have been linked to mortality in many fish species, and drawn-out fights might also cause mortality at lower water temperatures.

How do I minimize fish injuries?

Use the appropriate fishing gear. Avoid live baits such as worms and shrimps etc. Live baits often cause deeper injuries than artificial lures, and this will cause higher mortality levels. Streams and rivers provide important nursery grounds for juvenile fish, and live baits are particularly inappropriate in such environments. For that reason, live baits have been banned in all streams and rivers in every highland municipality of Norrbotten County. Please observe that the prohibition is enforced even if your intent is to release all specimens below the minimum size limit.

To summarize, please remember to:

- Fight fish as quickly as possible to prevent lactic acid build-up and higher mortality rates.
- Use the appropriate gear (rods, reel, and line) for the size of the fish you are targeting. Unnecessarily light equipment will prolong the fight and increase the risk of fatal injury.
- Please respect local restrictions at all time. In general, you are allowed to keep five salmonids (brown trout and/or grayling) per angler and day.

However, remember that the so called 'bag limits' define upper limits, i.e. the maximum number of fish that you may kill and keep per angler and day. In some state-owned waters, additional and site-specific restrictions are enforced by the County Administrative Board of Norrbotten. Local restrictions are outlined and described in maps for each municipality (this brochure covers Jokkmokk Municipality).

Permits presented in this brochure are intended for recreational fishing. So called house hold and subsistence fishermen must apply for alternative permits.

Revival and Release

Here are a few things to think about when unhooking your catch:

1. If possible, try to keep your catch in the water during hook removal and handling. To release your catch in the water, hold onto the hook and rotate it carefully until the weight of the fish can be used to free it.
2. If your catch cannot be unhooked without handling, make sure that your hands are wet before you touch the fish. By handling your catch carefully you will avoid injuries to its mucus layer and prevent infections. Avoid squeezing the fish over its abdomen and do not touch its gills.
3. If your catch is alive but turns upside down and floats to the surface, try to help it orientate itself and position its head towards the current. By oxygenating it you will help it break down lactic acid within its muscle tissue so that it can make a faster recovery. When the fish shows signs of wanting to break free, let it go. However, do not release it in the main current. A calmer location will be better suited given that most fish require additional time to recover.
4. If your catch is bleeding and shows little signs of recovery it should be kept and accounted for, i.e. become part of your bag limit.

Fishing rules

General fishing rules, above the cultivation limit, in state-owned waters managed by the County Administrative Board of Norrbotten:

- A fishing permit is required and can be purchased either online (www.natureit.se) or from local retailers (listed below).
- Permit holders are allowed to use one fishing rod (line equipped with three hooks maximum) per angler. Other rules are enforced in trolling lakes (see map). Please note that the fishing license does not give the right to fish with pole hooks and similar gear. Examples of such tools are ice fishing rods that are not under direct supervision and pike shears.
- There's a daily limit on the number of salmonid fish you can keep. Catch limit (trout and grayling): 5 fish in total, e.g. 2 trout and 3 grayling.
- If you want to keep your catch, salmonid fish must be of a certain size (minimum length): grayling (0.35 m), trout (0.35 m), and salmon (0.5 m). Captured fish are measured from the tip of the snout to the end of the tail.
- It is forbidden to use live bait (worms, insect larvae, crustaceans, fish etc.) in streams and rivers. If there are exceptions it is stated in your fishing permit. These rules have been enforced to protect juvenile salmonids (grayling, trout, and salmon).
- To ensure the sustainability of fish populations, trout fishing is not allowed in streams and rivers during spawning, i.e. from the 1st of September until the 31st of December. If you catch a trout by accident you must release it even if it is within the size limits or injured.
- Grayling fishing is forbidden between the 10th of May and the 10th of June in three municipalities; Arjeplog, Jokkmokk, and Gällivare, and between the 15th of May and 15th of June in Kiruna municipality. Restrictions are enforced to protect the grayling during spawning. If you catch a grayling by accident during this period you must release it even if it is within the size limits or injured.
- To protect fish populations from overexploitation, ice fishing is forbidden in all rivers apart from Piteälven, Kalixälven and Torneälven. Ice fishing is also prohibited in streams and lake-like (wide and slow-flowing) segments of rivers other than Piteälven, Kalixälven, and Torneälven. Wide and slow-flowing sections are considered 'lake-like' when the maximum width equals <200 m and the length equals <1 km.
- It is forbidden to confine fish or to restrict their movements in order to keep them alive until consumption or until bigger fish are caught.
- It is forbidden to sell captured fish.

Please remember that you are responsible for making informed decisions. Before you go fishing make sure that you understand all local rules and restrictions. Additional restrictions can be enforced by the County Administrative Board of Norrbotten.

Regulatory framework (relevant laws and regulations):

Fiskelagen (1993:787).

Förordning (1994:1716) om fisket, vattenbruket och fiskerinäringen.

Fiskeriverkets föreskrifter (FIFS 2004:37).

Purchase your fishing permit online

Fishing permits are now available at www.natureit.se

Fishing permits and costs

- 1 day: 70 SEK • 3 days: 125 SEK • 7 days: 220 SEK
- 1 year: 440 SEK + 125 SEK per family member

Children under 16 are not required to buy a fishing permit.

Site-specific fishing restrictions

1. Laitaure. Ice fishing only. Fishing is allowed during two time periods: Jan 1-May 2 and Oct 1-Dec 31.
2. Sitojaure. Ice fishing only. Fishing is allowed during two time periods: Jan 1-May 2 and Oct 1-Dec 31.
3. The Rapids of Lillselet, i.e. Lillseletströmmarna. Very sensitive area. Special permit required in addition to regular fishing license. Information and special permits are provided by Destination Jokkmokk in Jokkmokk free of charge.
4. Padjelanta Hiking Trail, Padjelanta National Park. Fishing permits are valid within 1 km from the trail on both sides. Bag limit: two salmonids (trout and/or arctic char) per angler and day. Please observe that other rules are enforced along the eastern shore of Vuoljaätno downstream Kutjaure.
5. Saltoluokta – Pielnenjarka. Fishing is not allowed from boats.
6. Aluokta. Fishing is not allowed from boats.
7. The Porjus Creek, i.e. Porjusbäcken. Live baits are allowed. No size limits.
8. The Pakko Creek, i.e. Pakkobäcken. Live baits are allowed. No size limits.
9. Boat engines must be turned off during fishing.
10. Boat engines must be turned off during fishing.

11. Guordesluoppal and adjacent pools. Summer fishing only. Open July 1st – August 31st.
12. Boat engines must be turned off during fishing. Bag limit: 5 trout or char per angler and day.

13. Tjaktjajaure
Bag limit: five trout or char per angler and day.

14. Lower Tarraure, Tarraätno down to Vallejäkkå.
Bag limit: one trout or char per angler and day, min length 35 and max 45 cm.

Fishing forbidden

1. Sårkåjaure.
2. Rautojaure.
3. Stipok.
4. Sitojaure and downstream waters until Vuoiturjäkko meets Sitoätno.
5. All water bodies within the national parks, i.e. Sarek, Padjelanta, and Stora Sjöfallet, apart from those in close proximity of Padjelanta Hiking Trail and sections of Pietsaure, Vuoljaätno, and Kårtejaure.
6. Suobbat p 660.
7. Parkasjaure and Tåresjaure.

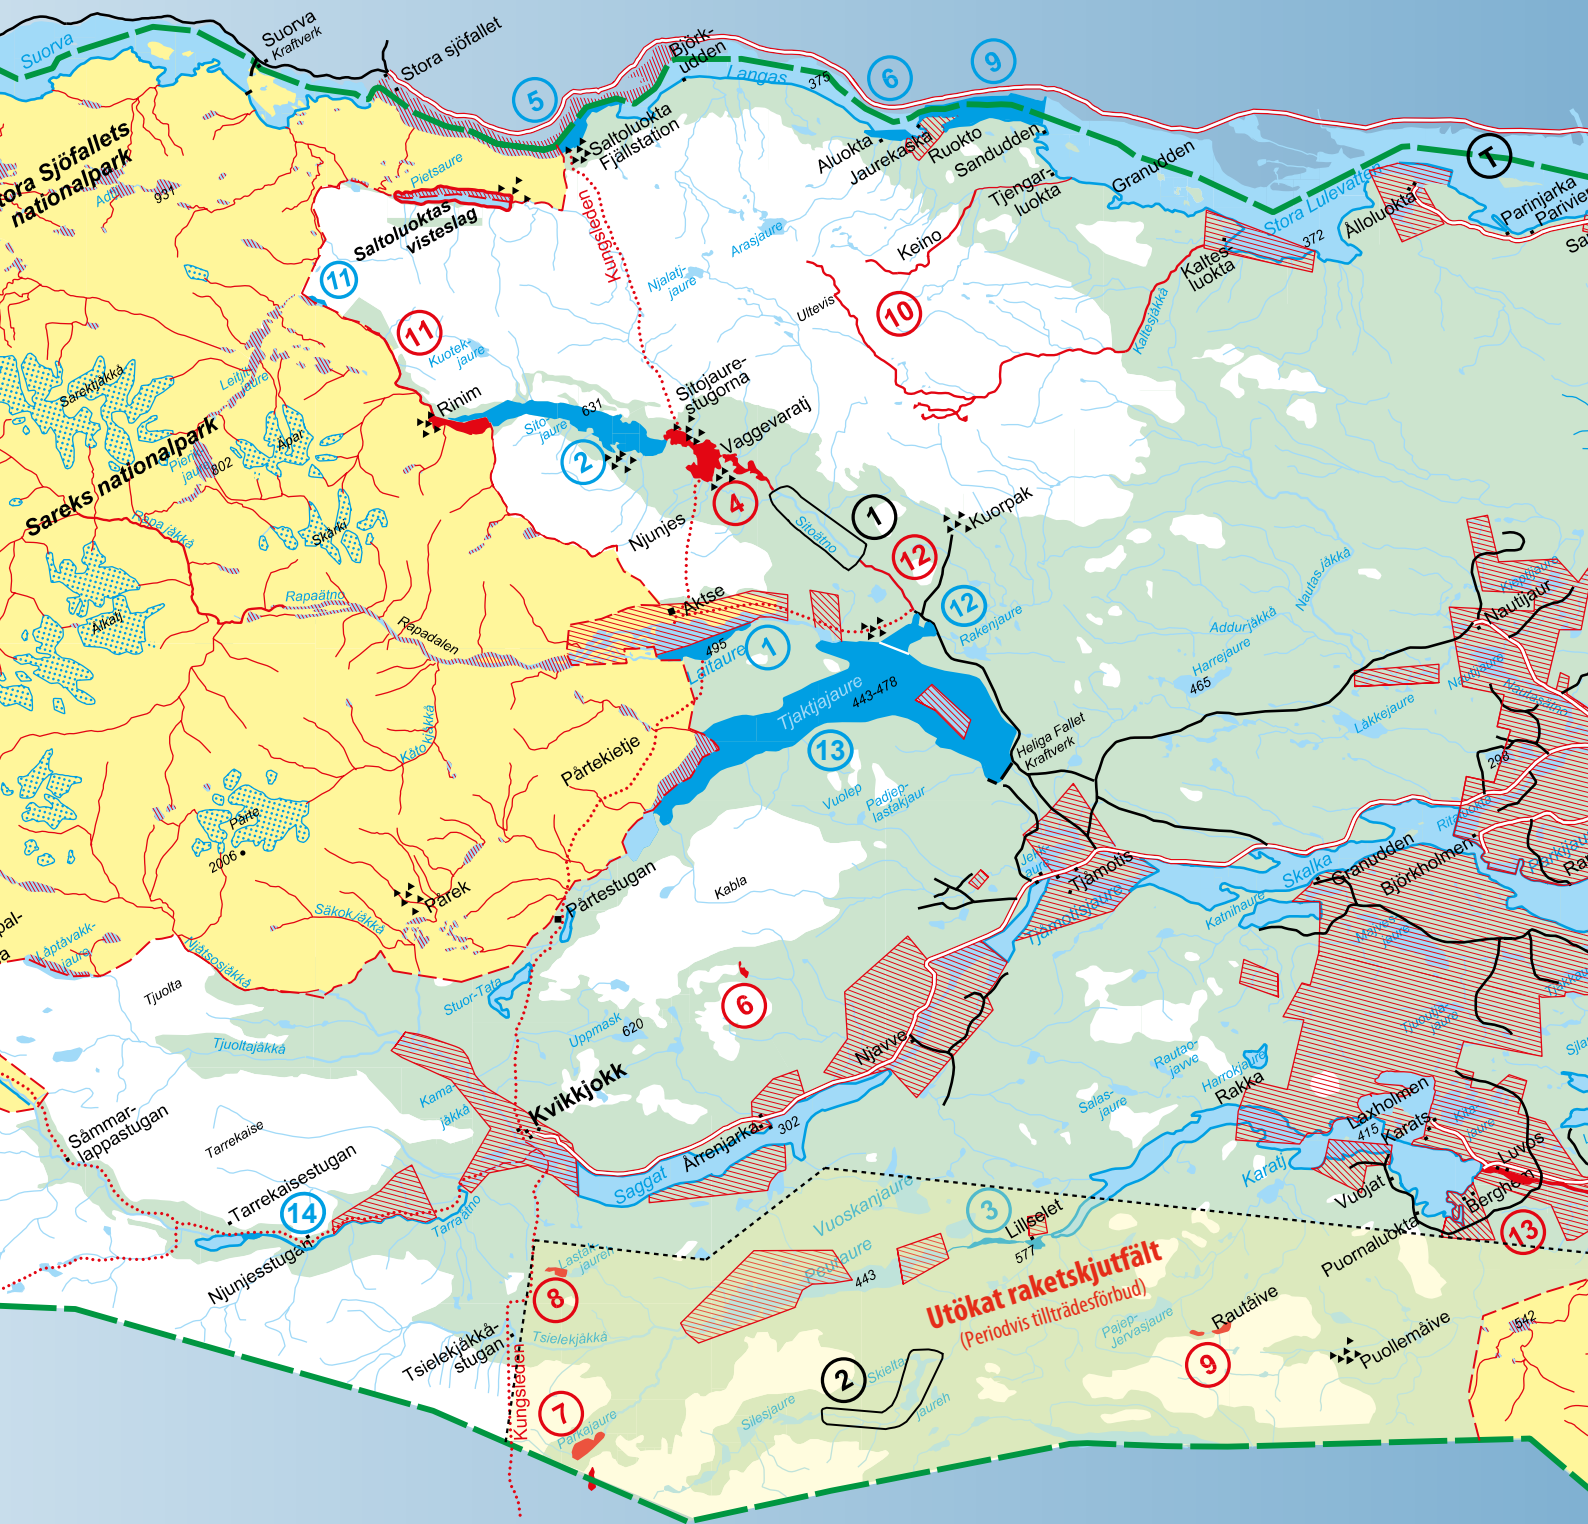

8. Lastakjaureh.
9. Rautare next to Rutåive (2 lakes).
10. Kaltisjokka, Luossajokka, and Tjeugaljokka.
11. Sitoätno from Guordesluoppal to Sitojaure.
12. Sitoätno from the riverbend above the rapids between Alep Manak and Vare Hårås down to the bridge.
13. Pärälåven from the outlet of Karatj and 150 meters downstream the confluence with Alep Uttjäjäkkå.

Recreational fishing in nature reserves

Many streams, rivers, and lakes belong to nature reserves in Norrbotten County. In Sweden, nature reserves are open to the public, and recreational fishing is often allowed, but not at the expense of viable fish populations and their habitats. To learn more about nature protection in Norrbotten County, please visit our website: www.lansstyrelsen.se/norr-botten.

Tourist Information Centres will also be able to provide brochures with extensive information.

Limited number of fishing permits available

The County Administrative Board of Norrbotten will sometimes administer special permits to allow limited fishing in restricted areas. This year there are two such areas in Jokkmokk Municipality: (1) Sitoättno, and (2) Skielta. To apply for a permit please contact the County Administrative Board of Norrbotten before March 30.

Address: Länsstyrelsen i Norrbottens län, SE-971 86 Luleå, Sweden

Telephone: +46 (0) 10 225 50 00

E-mail: norrbotten@lansstyrelsen.se

Website: www.lansstyrelsen.se/norrbotten

Camping

In Sweden, camping rules are generous in accordance with the Right of Public Access. Camps comprised of more than three tents, however, are advised to seek permission from the landowners before staying in an area for more than two nights. The rules have been enforced to prevent local sanitation problems and damage to the vegetation. Fishing camps might also deter and obstruct other visitors with reserved fishing rights.

For more information about the Right of Public Access please visit: <https://www.naturvardsverket.se/en/topics/the-right-of-public-access/#E409713778>

Help us save the Arctic fox! Do not leave food or waste from fishing and hunting in the mountains – it will attract the problematic red fox. For more info visit: fellesfjellrev.se

FISHING MAP

Jokkmokk municipality above
the cultivation limit

Fishing rules 2026

Map legend

Recreational fishing allowed all year.

Recreational fishing allowed during two time periods: Jan 1-May 2 and Jun 1-Dec 31.

Site-specific fishing restrictions (see supplementary info next to map).

Limited number of fishing permits available (see supplementary info next to map).

Fishing camp – Special permit required. Contact camp for more information.

Private property – Permits administered by the County Administrative Board are not valid. Local permits are sometimes sold by the owners.

Fishing forbidden.

National park or military area – fishing forbidden.

Trolling allowed. Number of fishing rods per person: max. 3. Number of baits/lures per fishing rod: max. 1. Number of fishing rods per boat: max. 6. Bag limit: 3 salmonids (grayling, trout or arctic char) per angler and day. Trolling with downriggers, planer boards, side planers, diving planes, and paravanes is only allowed in Stora Lulevatten. In Stora Lulevatten, you are only allowed to kill and keep trout if their adipose fin has been removed.

Area occasionally used by the military and may temporarily be closed for fishing. For more information please contact Försvarets Materielverk, tel: +46 929 373 91.
